

NMLS ClearView™

BY COMERGENCE

Stop searching the NMLS Consumer Access site to produce necessary information critical to the production of a loan during its lifecycle.

NMLS ClearView Benefits

Through the Application Programming Interface (API), lenders will save countless hours and labor costs through automation. NMLS ClearView returns over 35 real-time data points generated from Comerence's proprietary database of licensing information for all third party originators, including;

- Status on any NMLS licensed entity
- Status on any Loan Officer
- Verifies the originating entity and the Loan Officer are authorized to do business and in good standing throughout the loan process.
- Verifies the relationship of the Loan Officer to the employing mortgage company

Why is it Important?

It delivers accurate and valid information – every time.

For optimal S.A.F.E. Act compliance, NMLS ClearView should be pulled at the time of submission, prior to pulling loan docs and again at funding.

Getting Started

API documentation is available now on the Comerence Help Site:
